New Tools & Technology

Overview of RPA

**An Automation Journey** 

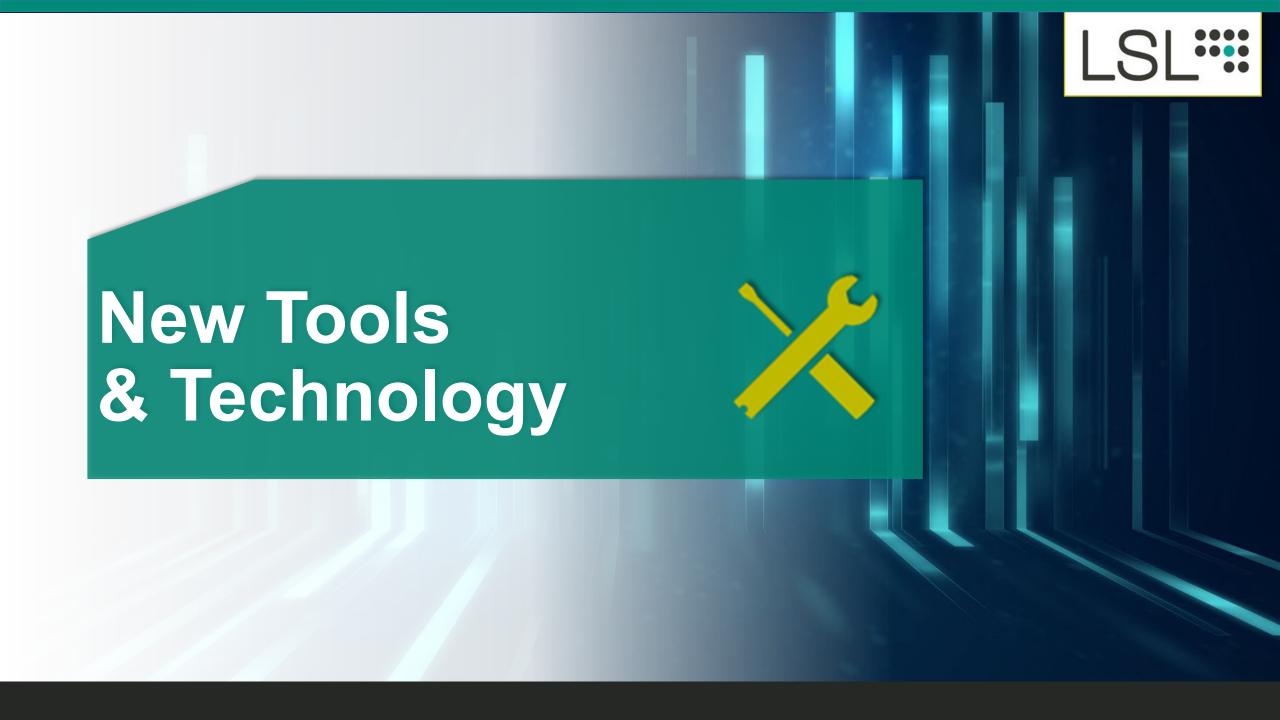

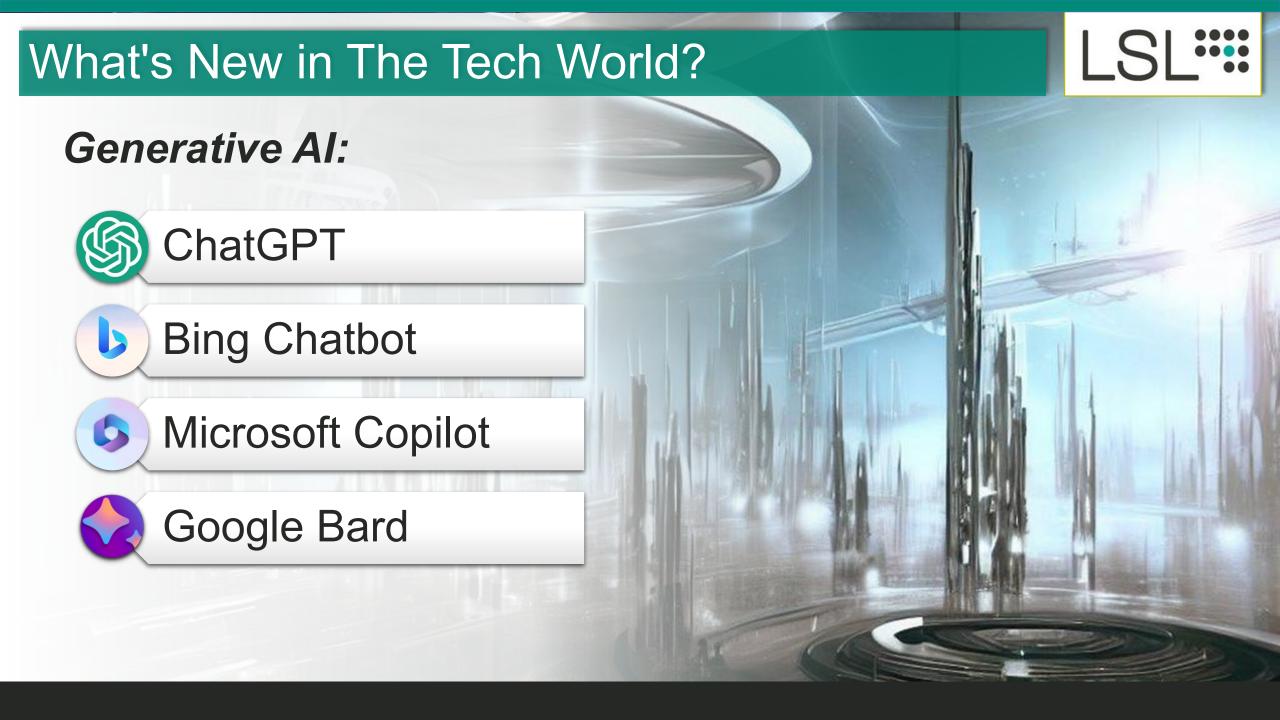

**RPA Automations In Action** 

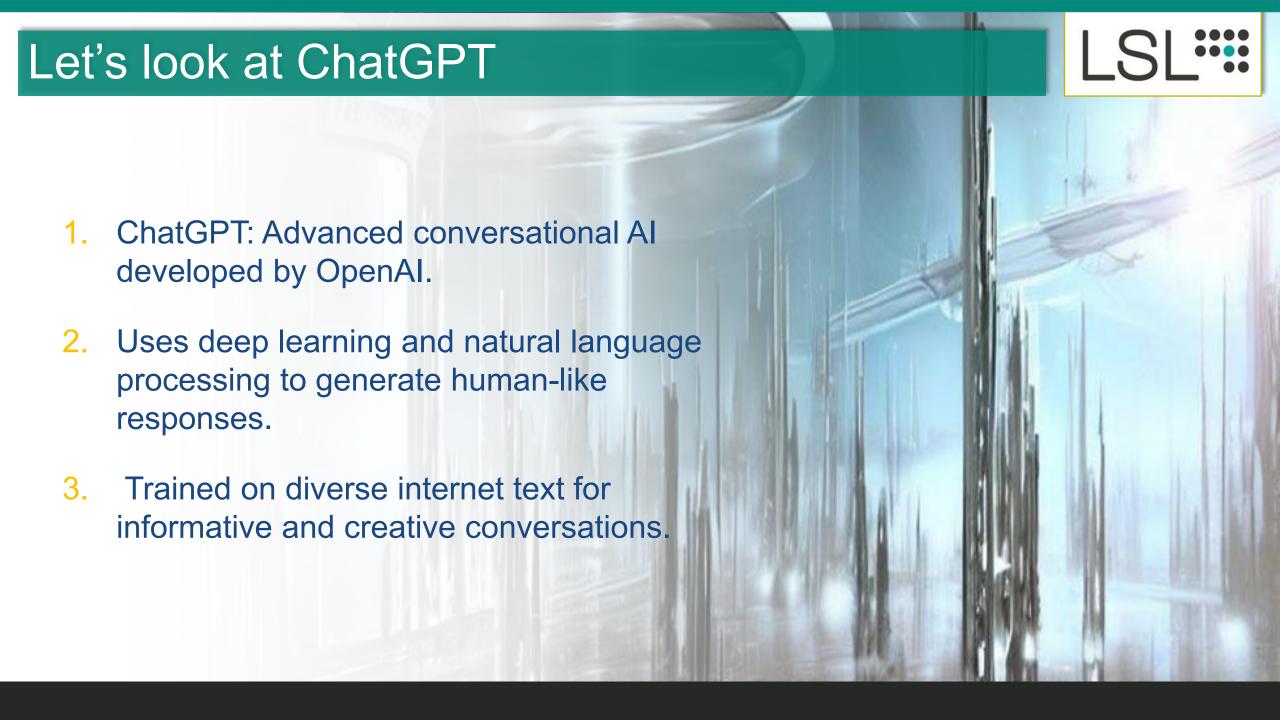

Q&A

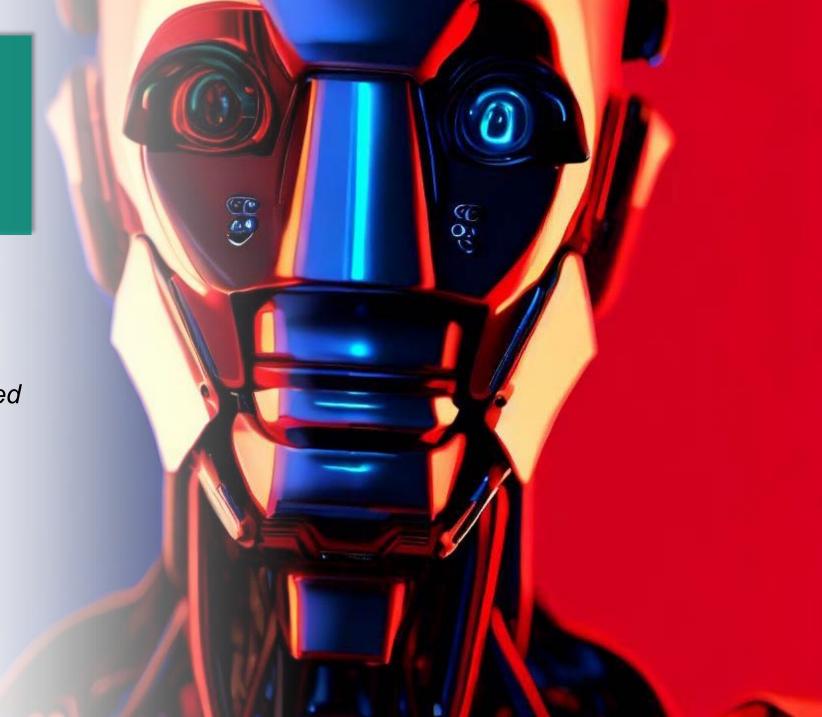

### ChatGPT: The Next Disrupters

"Al-powered chatbots like this will make human interaction obsolete."

"ChatGPT is just a sophisticated parrot, lacking true understanding and empathy."

"I worry about the ethical implications of AI models like this being used to deceive or manipulate people."

### **Prior Disrupters**

### Email - 1980's -

"Email is impersonal and lacks the personal touch of traditional letters or phone calls."

"It will lead to information overload and reduce productivity."

"Email is not secure, and sensitive information could easily be intercepted."

### WWW- 1991- World Wide Web-

"The web is just a fad, it won't replace traditional sources of information."

"It's too complicated for the average person to use effectively."

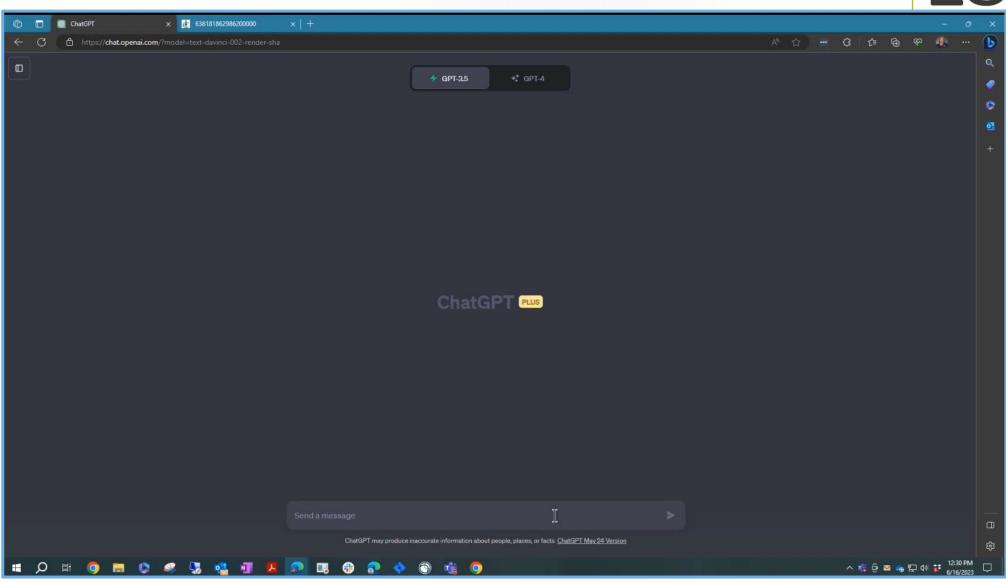

"The web will make us more disconnected from the real world and each other."

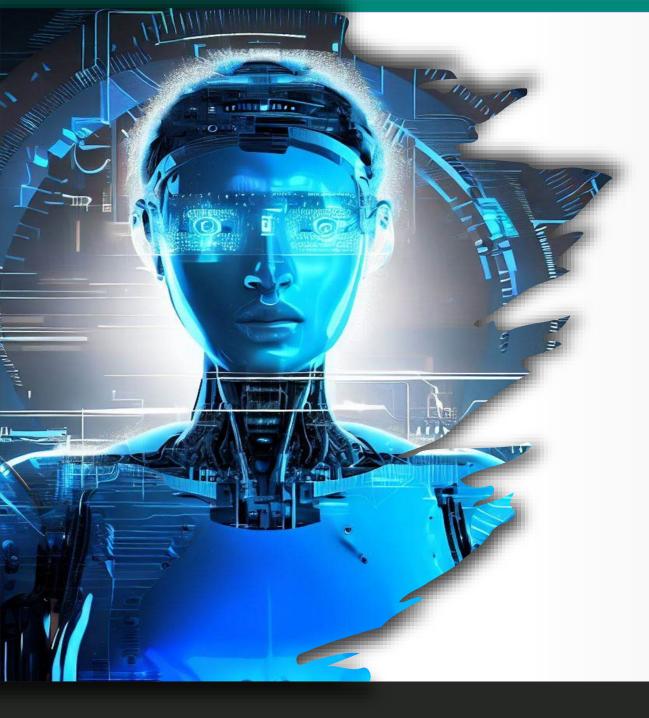

### Let's look at this in action:

https://chat.openai.com/

## What is Microsoft Copilot?

- It combines large language models with your data to enhance productivity.
- Copilot is integrated into Microsoft 365 apps to unleash creativity and unlock productivity.
- Copilot also has a new experience called BingChat

### Microsoft AI Chat Products

### Bing Al-powered Search

- Follow up questions/prompts
- Have chatbot summarize and cite the results into conversational answers
- Ask the chatbot to reformat the answer in a specific way for your usage

### Bing Al-powered Image Creator

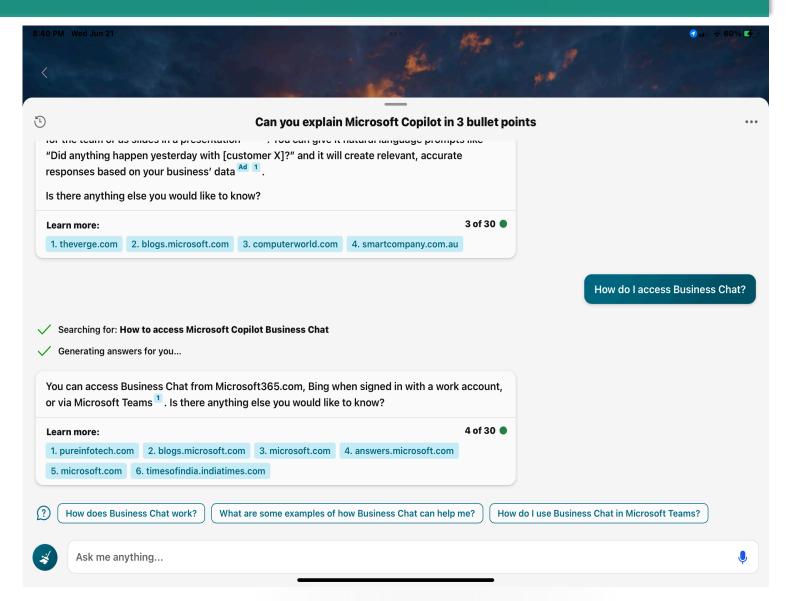

Search, chat, and create images in the chat box

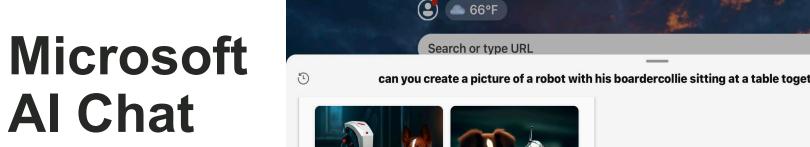

### Al-Powered Copilot for Microsoft 365 apps and services

- Embedded in-app chatbot assistant
- Generate office files or content for files
- Ask the chatbot to engage program features for you like pivot tables in Excel (In case you hate using Pivot Tables yourself)
- Remember Clippy? Like that but better! (If you miss Clippy, it is being resurrected as an emoji for Office 365 products)

### Microsoft AI Chat

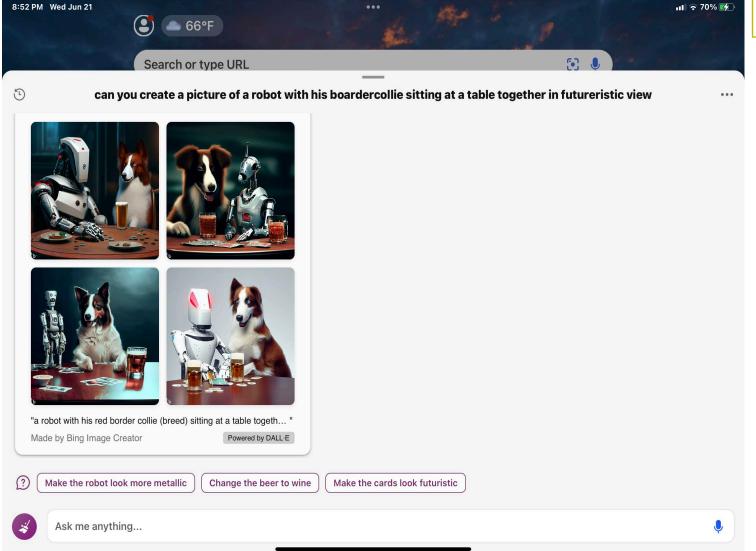

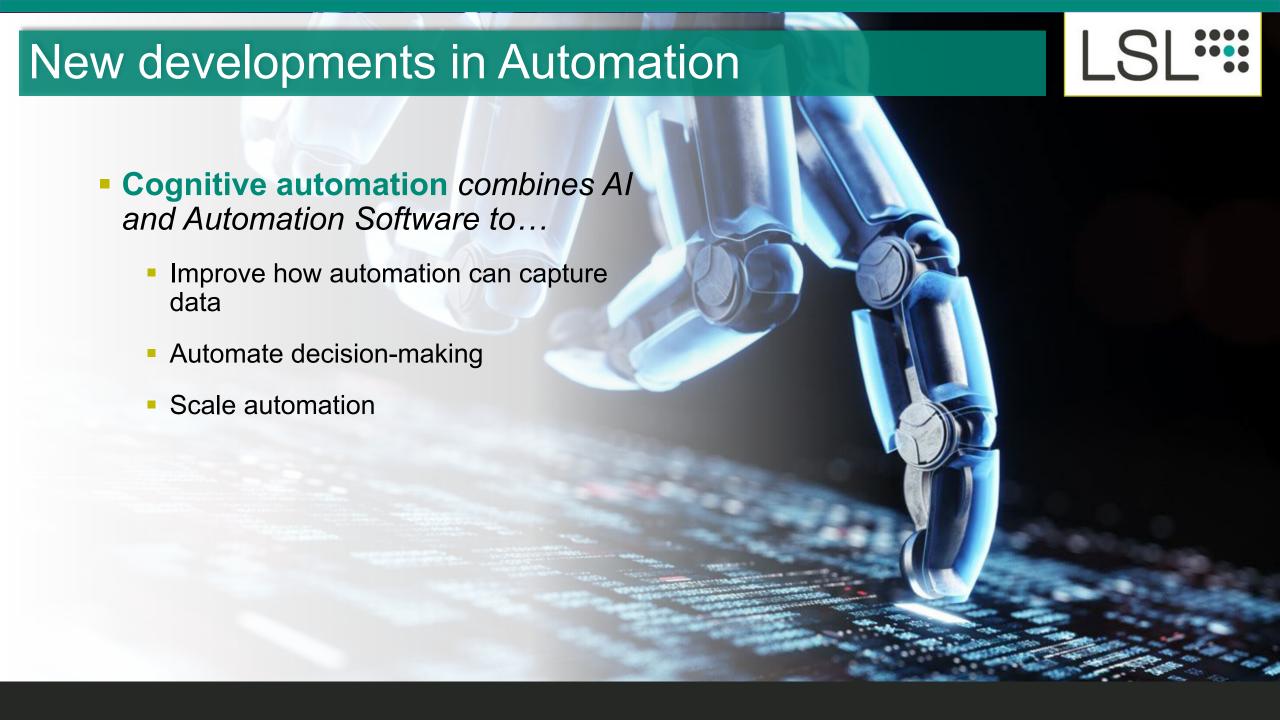

**Powered** by DALL-E

Creative

### Different tools in your tool belt

Robotic Process Automation (RPA)

Machine learning & Al

Document understanding

Generative pre-trained transformer (GPT) (like ChatGPT & DALL-E)

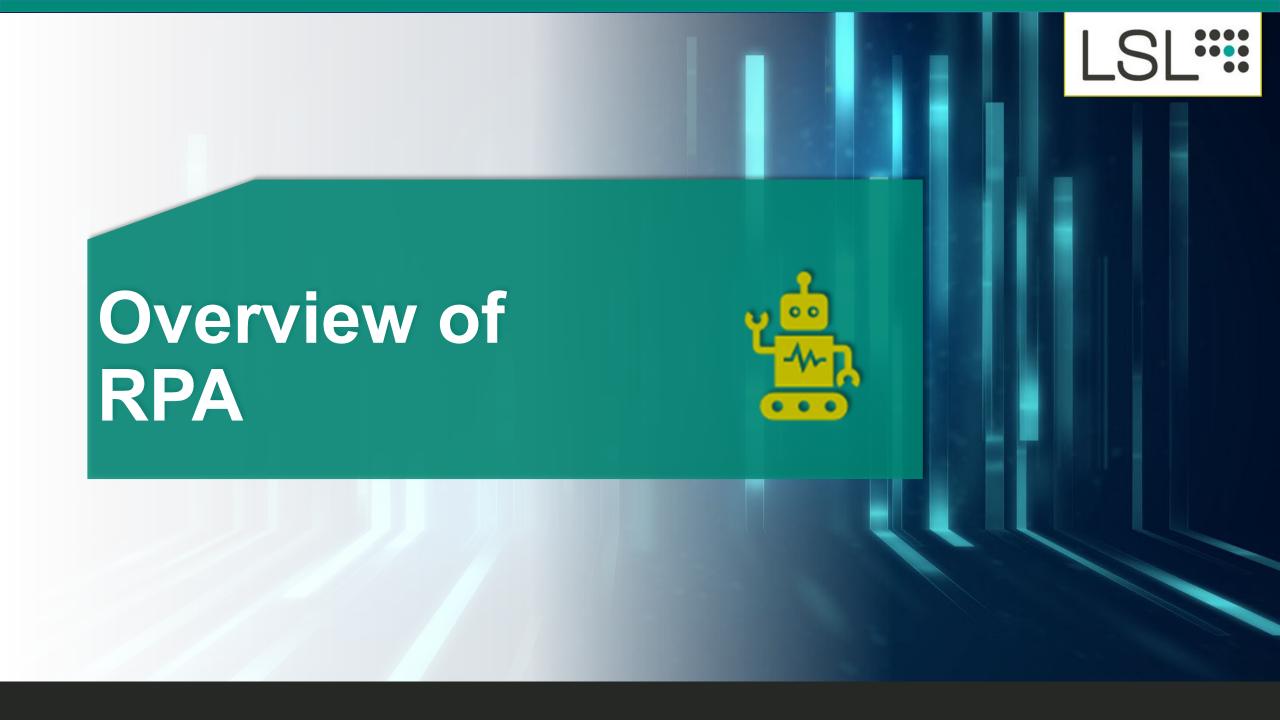

Microsoft Power Suite (like Power BI & Power Automate)

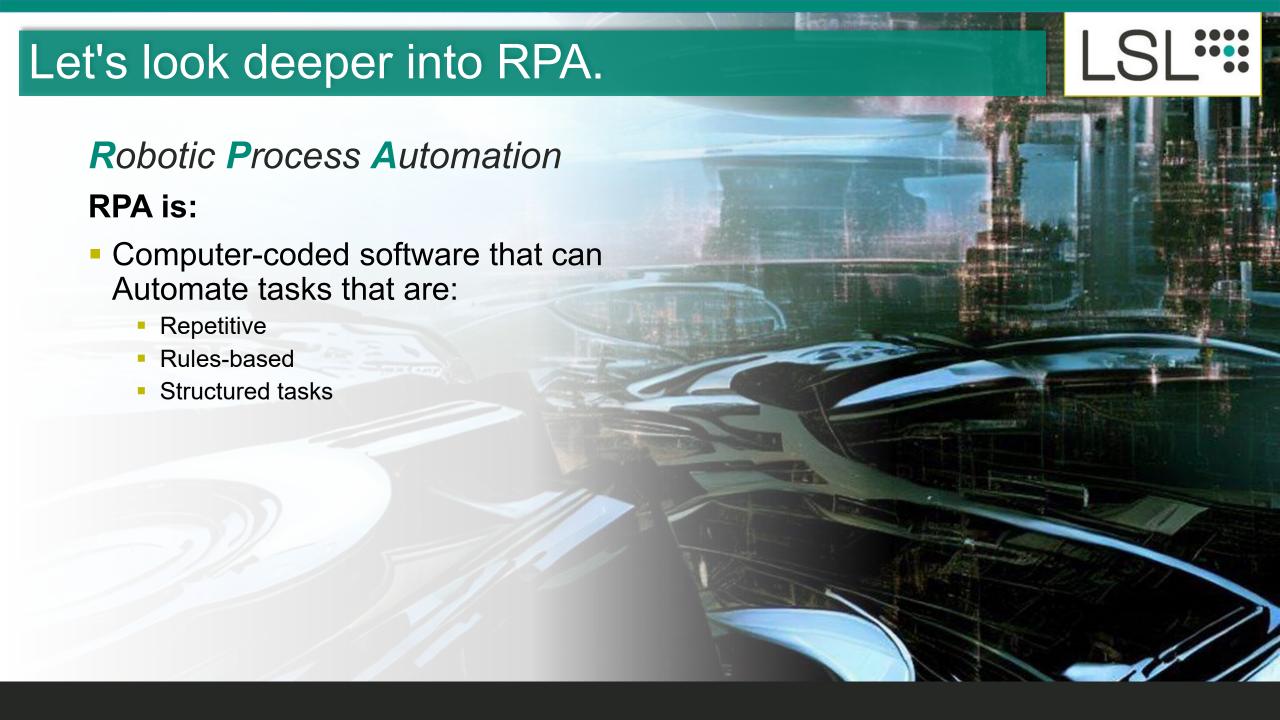

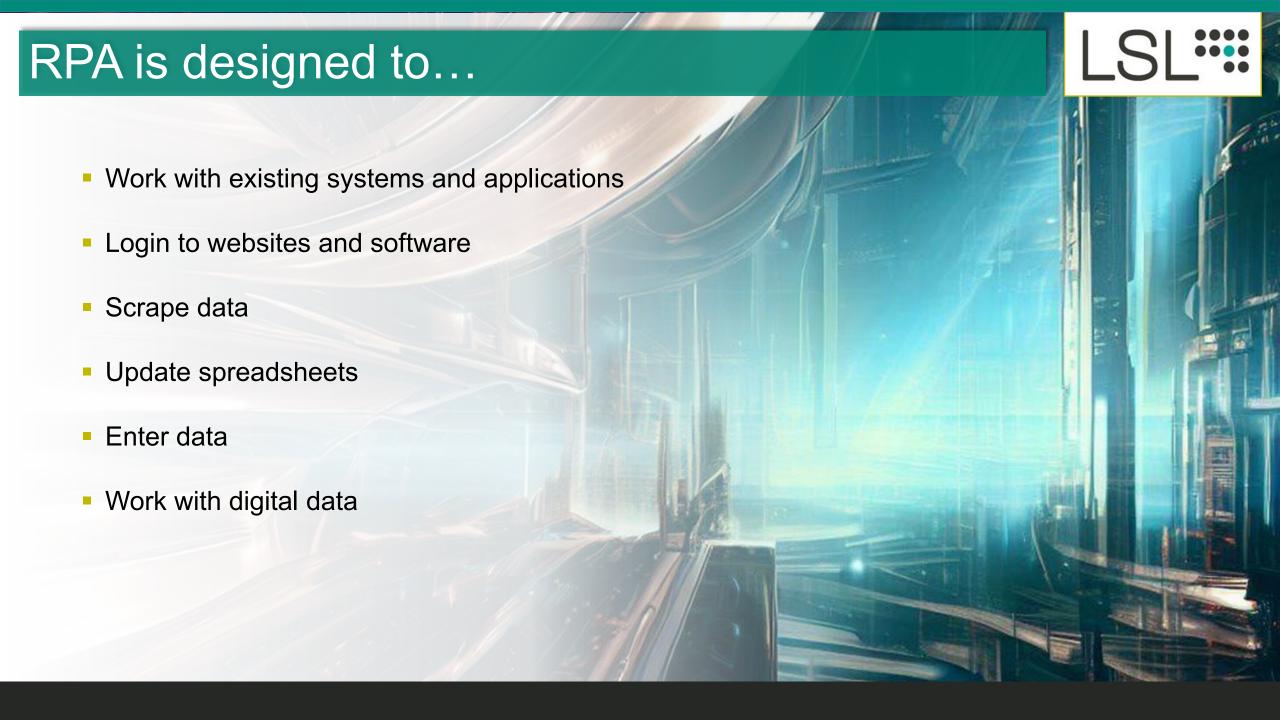

### Before You Start With AI:

- Research Al & Finance Applications
  - Examine your own workflows and processes for similar opportunities
- Al is not the solution for every problem!
- Bad Data in = Bad Data Out
  - Prioritize data literacy with your team
  - Seek to understand your own data
  - Clean, consolidate, and organize your data and sources
- Start with small Al projects and increase complexity in line with your team's understanding
  - Consider consultants to bridge the gap.

Embrace the concept of "Digital Evolution" by viewing Al implementation as an ongoing process, acknowledging the ever-evolving nature of technology.

### Dispelling Myths about RPA

### RPA IS...

- Computer-coded software
- Programs that significantly reduce manual effort, when performing repetitive rules-based tasks
- Cross-functional and cross-application macros

### RPA IS NOT...

- QQ Walking, talking auto-bots
- Physically existing machines processing paper
  - Artificial intelligence or voice recognition and reply software

### WHAT RPA CAN DO

Open email and attachments

Log into web/enterprise applications

Read and write to databases

Move files and folders

Copy and paste

Scrape data from the web

Extract structured data from documents

Follow "if/then" decisions/rules

Collect social media statistics

Connect to system APIs

### **Automation Opportunities**

#### **Sales**

- •Deal Configuration
- •Campaign Execution
- •Sales Cycle Management
- Proposal Creation
- •Quote Management
- Order Processing

#### **Marketing**

- •Social Media Reporting
- CampaignManagement
- Lead Generation
- Follow-up Emails
- •Website Pricing Checks

#### Human Resources

- •Workforce Planning
- •Commissions Payout
- •Internal Promotions
- •Employee Onboarding
- •Employee Termination
- •Severance Packages

#### **Operations**

- •Create New Account
- Close Account
- Adjust Account
- Transfer Account
- •Automate Reports
- Follow-up Emails

#### **Procurement**

- Forecasting
- Vendor Setup/ Maintenance
- Contract Creation
- Vendor Quote Solicitation
- Purchase Order Creation
- Vendor ShipmentOptimization

#### **Logistics**

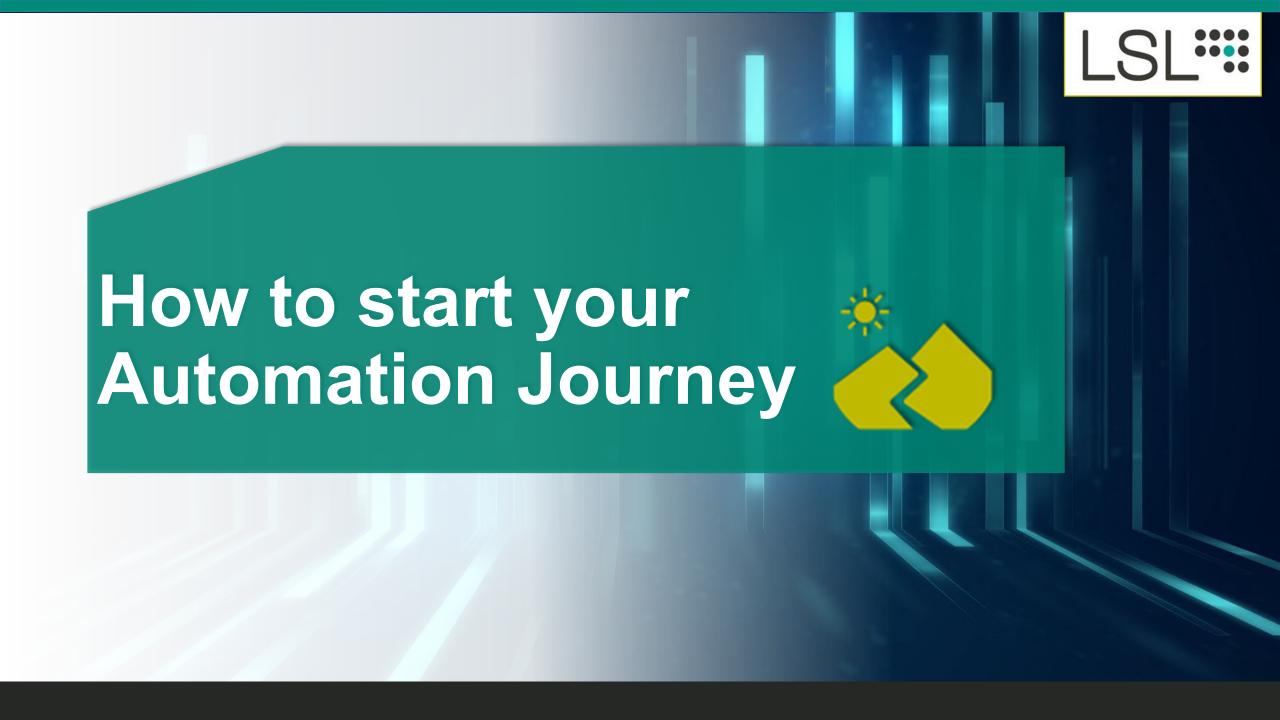

- Product Shipment Optimization
- •Shipping Cost Comparison
- Freight Claims & Payments
- Order Processing

#### **Accounting**

- Balance Sheet Reconciliation
- •Complex
  Accounting
  Spreadsheets
- •Financial Reporting
- Forecasting and Budget Consolidation
- Journal Entry

#### **Technology**

- •Computer Assignment
- Email ID Creation
- •Grant/Cancel System Access
- •Testing System Changes
- Equipment/App Inventory

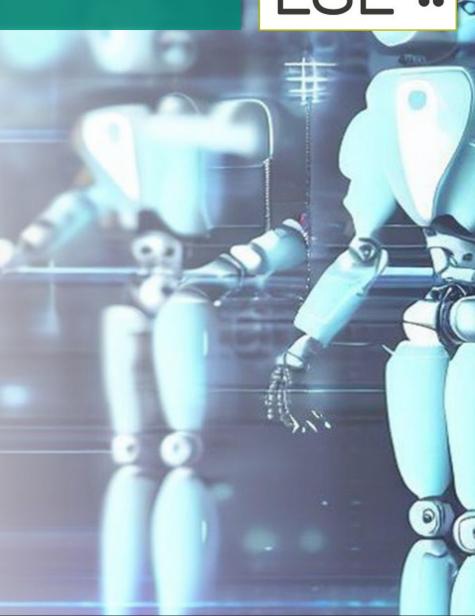

### Problems Identified

LSL

- Manual entry, repetition, errors
- Staff shortage
- Late filing fees
- Time-consuming tasks
- Unsure how RPA functions

"We know RPA can help, but we don't know where to start."

### It's A Journey!

#### **Education**

• Train the team on Automation, Process Improvement, and RPA specifically.

#### Identification

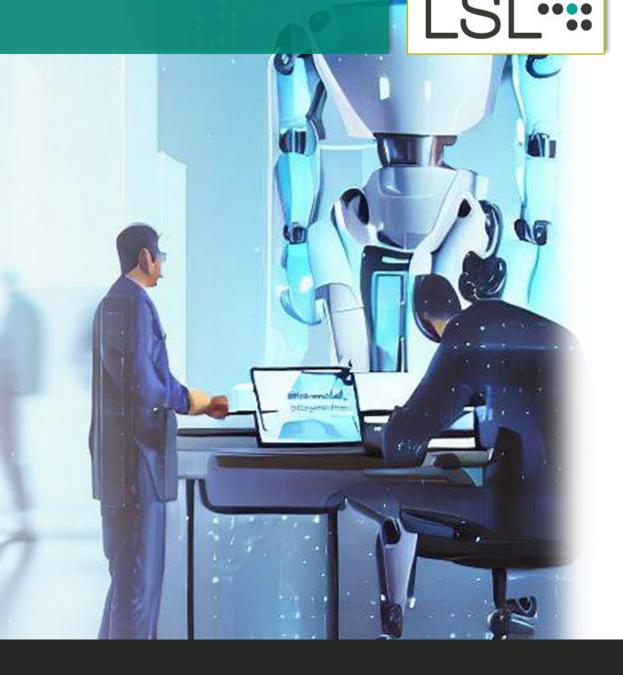

• Look at painful processes and use new knowledge to identify good candidates.

#### Conversation

 Analyze candidates for process improvement and ROI.

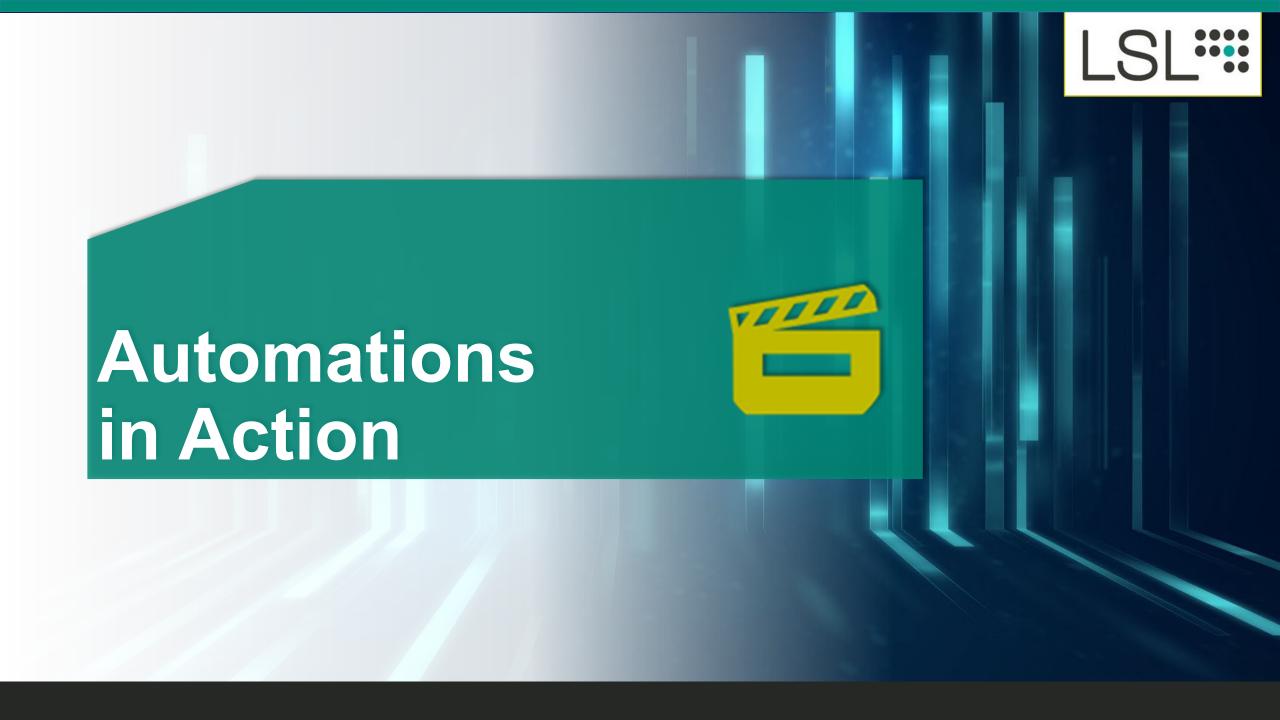

#### **Automation**

• Implement improvements, solutions, and best practices.

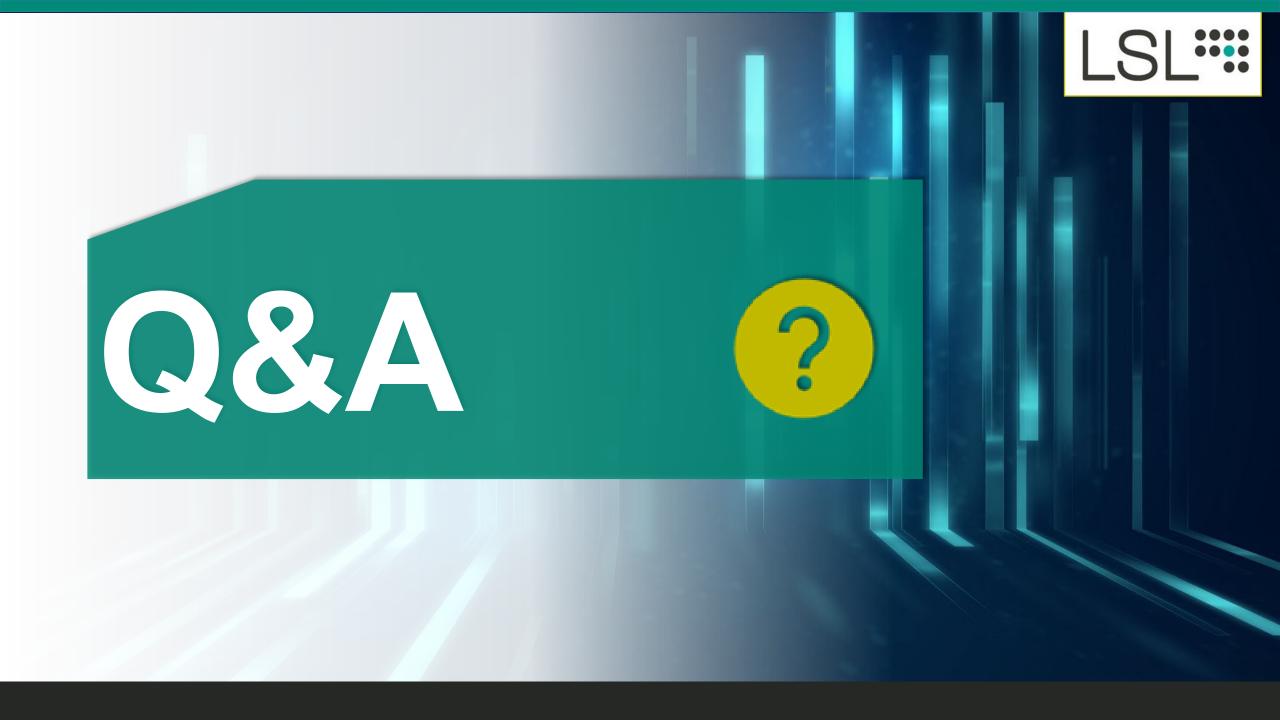

"Our automation journey has been successful in reducing manual efforts, increasing efficiency, and minimizing errors.

These are critical steps toward achieving operational excellence.

We encourage all organizations to embark on their automation journey and reap the benefits of automation."

Charles Lino, City Manager
Town of Pecos City, TX
